

Dan Bennett

Associate Creator Partnerships Manager, PUBG West

KRAFTON, Amsterdam

Creator partnerships and Partner Program operations for PUBG: BATTLEGROUNDS. I also keep the reporting, and I use AI on the repeat work.

At KRAFTON since December 2020. Earlier work includes APT Solutions, PriorsVLE, HowToMoodle and Capita ITS, plus community roles with PUBG Reddit, EGX, SpecialEffect and NovaFM.

Profile

I manage creator relationships and day-to-day Partner Program operations for PUBG WEST at KRAFTON. I work across Western markets. I coordinate campaigns and community events with creators, agencies and internal teams. I help Partners with requirements, issues and follow-up.

I came into this work from technical support

and from PUBG
community roles.
That included a
100k+ member
Reddit
community,
tournaments, live
broadcasts and
player feedback
for the game
team. I still write
the reporting and
the guidance,
and I turn
campaign
feedback into the
next step.

As well as the
KRAFTON job, I
build AI tools for
research,
documentation,
coding and task
coordination. I
write down the
inputs and the
sources. A person
reviews the
result. I write the
handover so the
next person can
check it and
continue.

Experience

Employment and community work, most recent first.

KRAFTON

December 2020 to present

EMEA Streamer Partnership Coordinator

2022

I joined KRAFTON in December 2020, on streamer and creator partnerships for the PUBG Partner Program on PUBG: BATTLEGROUNDS in the western region.

I manage creator relationships, campaign delivery and day-to-day Partner Program operations across Western markets. I write the guidance from the requirements. I keep the reporting up to date. I work with the other teams, and I turn the evidence into the next action.

Partner relationships and support

I am the day-to-day contact for PUBG WEST Partners. I explain program requirements, campaign expectations and the support available. That covers communications, feedback, sentiment and campaign participation across the Partner Program.

I write Partner guidance and campaign instructions from the questions that keep coming back. When an issue needs more than one team, I coordinate the follow-up.

Campaigns and activations

I plan, launch and report on streaming and short-form creator campaigns with HQ, regional teams, Marketing, Media Ops, agencies and creators.

I coordinate the brief, the requirements, content submission, review, completion tracking and follow-up.

I match Partner needs, assets, announcements and timelines with marketing, esports, product and community teams. That includes creator and community activations.

Reporting and data quality

I keep operational trackers so teams can see Partner activity, campaign progress, what is finished and what happens next.

I turn creator and campaign activity into performance reports and recommendations. I separate what the program controlled from wider product and market factors.

I improve the reporting workflows, the data checks and the automation, so the same operational checks are easier to run and review. I am moving manual checks onto tools that use our data and can take more of the load.

Feedback and evidence reviews

I set up routes for creators to raise an issue, send evidence and get a follow-up.

I lead evidence reviews with the other teams. We turn campaign, Partner and community feedback into prioritised actions for PUBG WEST.

APT Solutions

November 2019 - December 2020

Service Desk Agent

I supported membership software as one of three Service Desk Agents. Customers included small taxi firms and large unions. The software is for not-for-profit membership organisations, including trade unions, professional institutions, sporting bodies and charities.

- Covered UK, Australian and New Zealand customers across three shift patterns, including nights

- Investigated incidents, identified causes and considered how to prevent recurrence

- Wrote clear customer-facing incident reports and supported customers across multiple time zones

PUBG Reddit (r/PUBATTLEGROUNDS)

2018 - December 2020

Volunteer Community Manager & Community Games Host

I joined as a community member, then became a moderator, then led community operations for a 100k+ member subreddit. The community covered PLAYERUNKNOWN'S BATTLEGROUNDS on PC, Xbox One and PlayStation 4.

- Moderated the community, resolving conflicts and applying community standards fairly

- Turned player feedback into structured discussions with the game team through Reddit and Twitter

- Worked with PUBG Corp staff on community events, giveaways, bug reports and player feedback

- Gathered evidence for the Community Reporting team and submitted cases to the development team.

- Later joined that team, providing evidence of rule-breaking, including cheating

- Ran Community Custom Games, including tournaments, leaderboards, live streams and casting on Twitch. Some modes were created with the team and players

- Managed the PUBG Reddit Twitter account and built Discord bots in Python to support community operations

PriorsVLE

2017 - 2019

Director & VLE Technical Consultant

Concurrent with HowToMoodle (2012 to 2018)

I co-founded a Moodle technical support, hosting and development business. We built plugins, migrated sites and ran upgrades. PriorsVLE is a virtual learning environment (VLE) business. We worked with schools, colleges and businesses, including sites owned by the customer or by third parties.

- Managed client relationships and took requirements through to the work we had agreed

Built internal systems for the day-to-day work and used LEAN on those workflows

Provided first-line support for client users and coordinated technical follow-up

Managed invoicing and payment follow-up

Ran social media marketing, sharing Moodle tips, news and service information

EGX & epic.LAN

17th October - 20th October 2019

Watch & Learn PUBG Professional

epic.LAN brought me in to teach new players in their Watch & Learn area during EGX 2019. I spent four days running 30-minute sessions, teaching people the basics of PUBG, showing them how to improve, and giving console players a chance to try the PC version. PUBG is PLAYERUNKNOWN'S BATTLEGROUNDS.

Helped set up and pack down multiple EGX stages managed by epic.LAN

Ran my own dedicated Watch & Learn station for all four days

Taught complete beginners the basics

Posted the sessions on my own social media

Chicken4Charity - SpecialEffect

26th July 2019

PUBG Observer

I volunteered at SpecialEffect's Chicken4Charity 2019 PUBG tournament. It had 20 teams from the UK games industry. The event raised over £14,000 to help disabled gamers play.

Helped set up matches and managed in-game observer cameras to capture live action

Supported broadcasts on Steam, Twitch and Facebook

HowToMoodle

2012 - 2018

Support Technician

Concurrent with PriorsVLE (2017 to 2019)

I supported Moodle and Totara customers with setup, upgrades, migrations and troubleshooting. I maintained client relationships and kept customers informed during incidents, including 24/7 hosting on-call cover. We agreed the timescales, and the work was done to them.

Automated manual setup and support tasks with scripts and provided first-line support through Helpspot. Designed and implemented that automation for most of the manual setup work

Provided Moodle/Totara administrator and technical server support for customer sites hosted in-house or by third parties

Managed internal CentOS hosting (versions 5, 6 and 7) with Apache, PHP, MySQL/MariaDB and DirectAdmin, plus client servers running CentOS, Ubuntu, Gentoo and Windows Server with HTTPD, Apache2 and Nginx

Monitored sites and servers with Icinga/Nagios and kept customers informed when issues affected service

Debugged Moodle/Totara application issues in PHP and MySQL, raised issues against the Moodle/Totara Tracker and tested plugins with JIRA

Managed Git repositories for Moodle/Totara code, custom plugins and themes, and documented technical changes to the hosting platform

Rolled out a Windows Server 2012 domain controller and managed company desktops and laptops, including troubleshooting, patching, hardware/software upgrades and asset tracking

NovaFM

2012 - 2014

Volunteer Presenter / Producer

I hosted and produced two weekly shows at Newport's community radio station. One covered new, upcoming and rarely heard artists. The other focused on dance, trance and UK hardcore.

Wrote and produced hourly Friday and Saturday news bulletins

Supported outside broadcasts at local festivals, including Newfest and The Pheztival, in 2012 and 2013

Capita ITS (ex-i2Q Education)

2008 - 2012

Junior Technical Support

I joined i2Q Education, later Capita ITS. I supported schools and colleges using Moodle, and I handled the annual data rollovers in their customised environment before the new academic year. i2Q Education was part of Synetrix.

Resolved platform questions and issues during term time

Worked with developers on QA for OpenHive, writing test plans and automated test scripts

Current work

Partner support

Partner operations

I turn Partner requirements, repeat questions and evidence into guidance, a support route and a follow-up.

Campaign delivery

Campaigns

I coordinate briefing, delivery, submission, review, completion tracking and reporting with creators, agencies and internal teams.

Repeat work

AI and tools

I use AI on repeat tasks where the source is written down. A person reviews the result, and the handover can be picked up again.

Skills

Creator and Partner operations

Creator relationships

Campaigns from brief to report

Support and escalation

Work across teams

AI and tools

Research with the source linked

CLI, MCP and REST tools

Source notes and a human check

Handovers another person can continue

Reporting and delivery

KPI and OKR reporting

Data checks and workflow design

Feedback and evidence reviews

Community operations

AI and tools

As well as creator partnerships, I build AI tools for research, reporting, documentation, coding and task coordination.

I write down the inputs and the sources. A person reviews the result. I write the handover so the next person can check it and continue.

How I work with AI

I use AI tools for research, analysis, drafting, coding and documentation. I treat the output as a draft, and I check it.

I write the inputs, the source links, the handover, the review and what done means, so the next session can continue.

I connect agents to tools through CLI, MCP and REST. Credentials, permissions and anything sent outside stay behind a check I approve.

I keep memory, task history and changes in files I can read and undo. I do not leave the record as model output I cannot check.

I check the output against the source, the tests, the build and the place it is meant to go before I call it finished.
