Profile

I own the PUBG Partner Program for PUBG West end to end: around 350 creators (around 280 active in a typical month) across EMEA, Türkiye, CIS, North America and Latin America, on PC and console, across Twitch, Kick, YouTube and TikTok. I partner directly with HQ on programme direction and approvals, and I build the tooling the programme runs on.

Experience

KRAFTON — December 2020 to present

Associate Creator Partnerships Manager, PUBG West — February 2024 to present

Streamer Partnership Coordinator, EMEA — December 2020 to February 2024

- Own the programme end to end across EMEA, Türkiye, CIS, North America and Latin America: creator selection, rules and benefits, quarterly activity audits, campaigns and Partner support.
- Handle Partner contracts and agreements, and scope and negotiate agency work.
- Planned and oversaw a 16-creator regional streaming campaign delivered with an external agency, and prepared its social posts and assets: delivered all 64 contracted streams, with viewership and watch hours well above target.
- Write paid creator campaign plans and submit them to HQ for approval.
- Migrate Partner Hub to KCN and build creator mission campaigns on the new platform.
- Run a set of AI agents that automate campaign operations, reporting and documentation, with a human approval step before anything goes out.
- Rebuilt the Partner data dashboard end to end; it replaced spreadsheet tracking and is now the single source of truth for programme reporting.
- Produce weekly creator sentiment reporting and monthly programme reporting for HQ leadership.
- Built an automated player-report intake and triage system that I designed and operate.

Earlier experience includes service desk work at APT Solutions, a director role at PriorsVLE, Moodle support, Linux hosting and scripting at HowToMoodle, and junior technical support at Capita ITS.

Community work includes leading a 100k+ member PUBG subreddit, plus EGX, SpecialEffect and NovaFM.

AI and tools

I also build the automations behind the programme, including a weekly report cut from about three hours to about five minutes. Everything AI-assisted has a written source and a human check before it ships.

Python, PHP and MySQL, Git, Linux, Tableau and StreamHatchet.
